The purpose of the newsletter is to keep all those concerned with Glassy-winged sharpshooter (GWSS) and Pierce’s Disease (PD) problems in the Temecula Valley up to date on what is going on with the monitoring program at the University of California, Riverside. The Temecula Glassy-winged Sharpshooter (GWSS) Area-Wide Management Newsletter displays an update of twice monthly GWSS trap catches and treatment control areas in citrus with corresponding comments. There are approximately 140 yellow sticky GWSS traps in citrus groves throughout the Temecula Valley. Only traps that caught GWSS will be displayed on the weekly graphs. The newsletter always lists the field, trap # and total (number of GWSS) adults that were caught on a yellow sticky trap. This list is found near the graphs.

**WEEKLY COMMENTS**

With warmer weather conditions underway, we can expect to see an increase in GWSS activity, as seen in this week’s newsletter. Twenty-nine GWSS adults were caught on 12 traps among 9 fields.

Just another friendly reminder, the Temecula GWSS Newsletters are available on the Temecula GWSS blog. Additional notes and links to informative articles on the pest and Pierce’s Disease are available there too.
